

Filter simulator

Compare energy labels with the filter simulator

CURIOS TO KNOW HOW YOU CAN SAVE MONEY AND IMPROVE YOUR AIR QUALITY?

Calculate how much energy and money you can save using energy efficient air filters. Try our FREE filter simulator

AFPRO Filters has developed a smart and innovative tool, the filter simulator, with which you can evaluate the total costs of filtration (purchase, maintenance, energy costs) and improve indoor air quality. It will help you determine the improvement axes of your filtration chains in terms of indoor air quality and energy consumption.

1 € = 1 Pa: for 1 extra Pascal coupled to the pressure vessel of an air filter, 1 euro extra is added to the annual energy bill.

Come and try it for free by clicking here
